

MARINE NATURAL CAPITAL

Understanding and Protecting Marine Assets

Marine natural capital represents the immense economic and societal value we derive from the ocean's natural resources.

These vital benefits include:

- ✓ Supplying food and raw materials
- ✓ Regulating our climate
- ✓ Enabling recreation, tourism, and wellbeing
- ✓ And much more

OUR ROLE

At MEDIN, we're driving progress in how the UK understands and protects its marine assets. To support smarter, more integrated assessments of marine natural capital, we've upgraded our tools and training to ensure socio-economic data is as accessible as environmental data within our data portal.

As the importance of marine ecosystems in policy and decision-making grows, so too does the demand for robust, joined-up data. By bringing socio-economic insights alongside environmental evidence, MEDIN is helping shape a more informed and sustainable blue economy for the future.
